

Are you living with Chronic Migraine?

- Do you suffer from chronic migraine that limits your day-to-day functioning?
- Have you suffered from migraine for at least the past 12 months?
- Have you tried or been offered to try Botox or CGRP treatments but none have provided significant relief?
- Are you able to commit to attending follow up visits over the next 12 months?

If you answered yes to the above, you may be eligible to participate in a first in human clinical trial that involves a surgical procedure that may help reduce the pain and number of attacks associated with migraine. You will be reimbursed for your time in the study.

To see if you might qualify, please contact Australian Medical Research on the number below!
